EDUCATION

2026 - Present

B.TECH - Artificial Intelligence & Data Science

Nadar Saraswathi College of Engineering & Technology - Theni

AWARDS & CERTIFICATIONS

- IIT Madras E-Summit '26 Exhibitor
- IoT & Hardware Systems Integration
- Full-Stack Development
- AI Engineering Internship Certification – HYSAS Technologies Pvt. Ltd.

TECHNICAL SKILLS

- **Programming** : Python, Java
- **Frontend** : HTML 5 , CSS 3 , JS , React v19.0
- **Backend** : Python - Flask , FastAPI , Java
- **Database** : PostgreSQL , MongoDB , Firebase
- **AI/ML** : OpenCV , Tensorflow , Numpy , Pandas , Scikit-Learn

SUMMARY

Ambitious B.Tech AI & Data Science student, Full-Stack Developer, and AI/ML Engineer with hands-on industry experience building scalable web applications and advanced RAG (Retrieval-Augmented Generation) systems. Skilled in React 19, Python, FastAPI, and Vector Databases, with expertise in integrating Generative AI models into production-grade applications. Demonstrated product-pitching capability by exhibiting flagship solutions at IIT Madras E-Summit '26.

PROJECTS

• **TN StudyMate :**

Full-Stack AI-Driven Educational Platform

- Project Overview: A full-stack educational platform featuring interactive 3D dashboards and real-time AI tutoring for personalized student learning.
- Technologies Used: React 19, Three.js, LLaMA 3.1 (Groq API), Python, Firebase.
- Real-World Solution: Boosts student engagement and direction using 3D visual learning and AI career guidance.

• **EduSync :**

AI-Powered Learning Management System

- Project Overview: An AI-powered Learning Management System (LMS) designed to automate academic evaluation and facilitate live institutional collaboration.
- Technologies Used: Python, FastAPI, MongoDB, WebSockets, LLMs, Voice Recognition AI.
- Real-World Solution: Automates essay grading and tracks institutional analytics to drastically reduce educator workload.

• **RAG System :**

Enterprise AI Knowledge Assistant

- Project Overview: An advanced RAG-based AI system built to index internal organization data and answer complex enterprise queries.
- Technologies Used: Python, Vector Databases, RAG Architecture, LLM Orchestration, Embeddings.
- Real-World Solution: Delivers instant, accurate answers from massive company documents without AI hallucination.
